Eawag, Swiss Federal Institute of Aquatic Science & Technology 

Main fields of activity

- Water for health and well-being
- Water for ecosystems
- Strategies to deal with conflicts of interest in relation to water

Staff

- 320 scientists incl. 100 doctoral students
- 160 technical and admin staff
- 27 apprentices

Subject areas of researchers

70% natural sciences
25% engineering sciences
5% social sciences

Sandec, Dept. Sanitation, Water and solid Waste for Development

Sandec Objectives eawag aquatic research 000

- Generating knowledge through **research**.
- Developing and facilitating the implementation of **new concepts and technologies** in water supply, environmental sanitation, and excreta, wastewater and solid waste management.
- **Increasing research capacity** and professional expertise on water supply and environmental sanitation in low and middle income countries.
- **Advocating** to make water supply, environmental sanitation and solid waste a priority in low and middle income countries.

Sandec's Research Groups eawag aquatic research 000

Strategic Environmental Sanitation Planning

Excreta and Wastewater Management

Municipal Solid Waste Management

Water Supply and Treatment

Safe Water Promotion

Background – The Global Challenge

The **poor are disproportionately most affected** by inadequate WASH

- 2.1 billion people do not use safely managed drinking water service (located on premises, available when needed, free from contamination)
- 844 million people still lack even a basic drinking water service
- 2.3 billion people still lack even a basic sanitation service
- In Least Developed Countries, 47% of the population has no facility to wash hands. 26% have facilities that lack soap or water.

- 842 000 deaths are caused by inadequate WASH per year
- 361 000 diarrhoeal deaths among children under-five of these deaths, or over **1000 child deaths per day** are caused by inadequate WASH

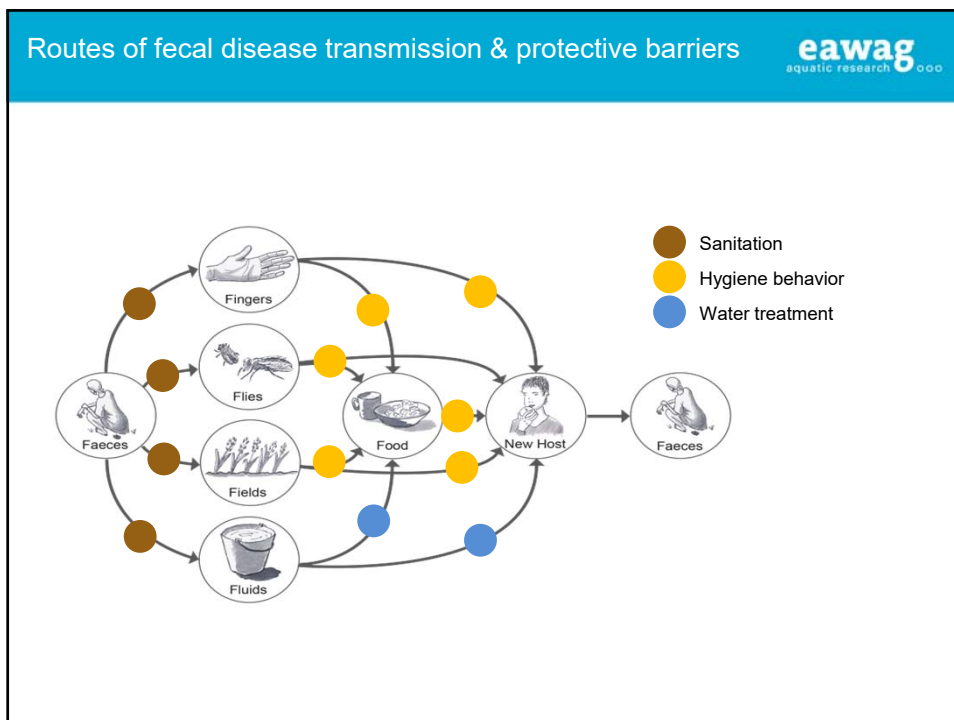

UN General Assembly resolution, July 2010

"recognizes the right to safe and clean drinking water and sanitation as a **human right**"

Criterion	UN Human Rights Council 2010
Sufficient quantity	Availability
Continuity of service	
Safe for health	Quality/safety
Aesthetically acceptable	Acceptability
Time/distance required to collect	Accessibility
Suitable for use by all, including young, old, disabled, etc	
Affordable	Affordability

Sustainable development goals		
		
Sustainable Development Goal (SDG) global targets: <ul style="list-style-type: none"> • Ending open defecation (SDG 6.2) • Achieving universal access to basic services (SDG 1.4) • Progress towards safely managed services (SDG targets 6.1 and 6.2). 		
Service level	Water	Sanitation
Safely managed	<ul style="list-style-type: none"> • Located on premises • Available with needed • Free from contamination 	<ul style="list-style-type: none"> • Private improved facilities • Safe disposal of excreta
Basic	<ul style="list-style-type: none"> • From improved source • Collection time <30 Min (↔) 	<ul style="list-style-type: none"> • Private improved facilities
Limited	<ul style="list-style-type: none"> • From improved source • Collection time >30 Min (↔) 	<ul style="list-style-type: none"> • Shared improved facilities
Unimproved	<ul style="list-style-type: none"> • From unprotected dugwell or spring 	<ul style="list-style-type: none"> • Pit latrines without slab or platform
Surface water/ Open defecation	<ul style="list-style-type: none"> • From river, dam, lake, pond, stream, canal 	<ul style="list-style-type: none"> • Disposal of faeces in open environment

Note: improved facilities	
	
Water	Sanitation
<i>Improved sources include:</i> <ul style="list-style-type: none"> • piped water • boreholes • tubewells • protected dug wells • protected springs • packaged or delivered water 	<i>improved facilities include:</i> <ul style="list-style-type: none"> • flush/pour flush to piped sewer systems, septic tanks or pit latrines • ventilated improved pit latrines • composting toilets • pit latrines with slabs

Improved WaSH in Eastern Uganda

Community around Lake Victoria consumes water directly from the lake

- ▶ health risks

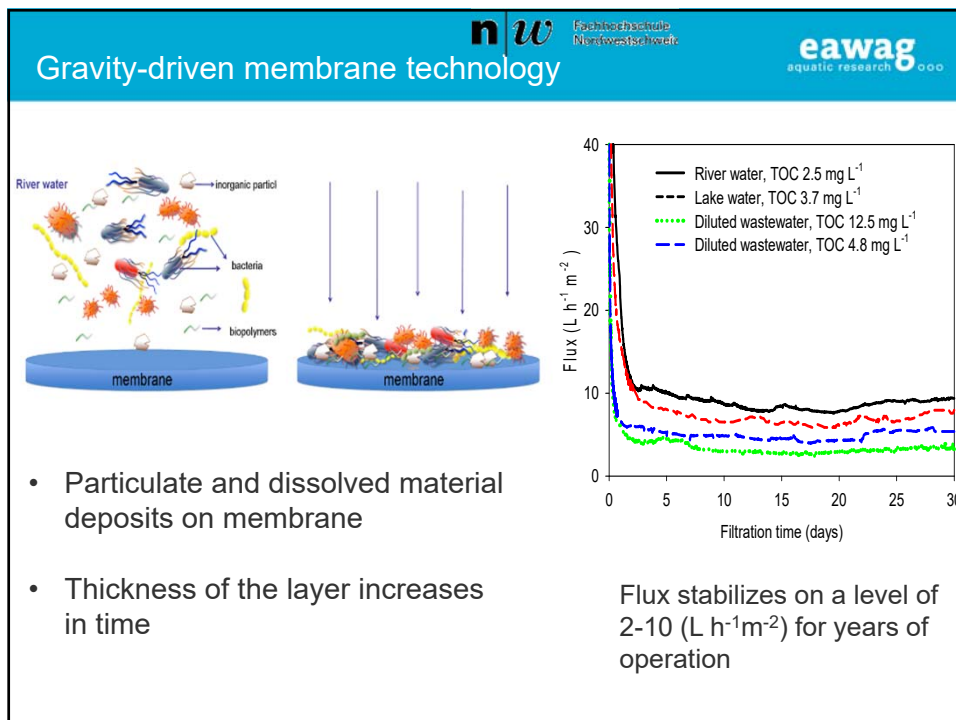

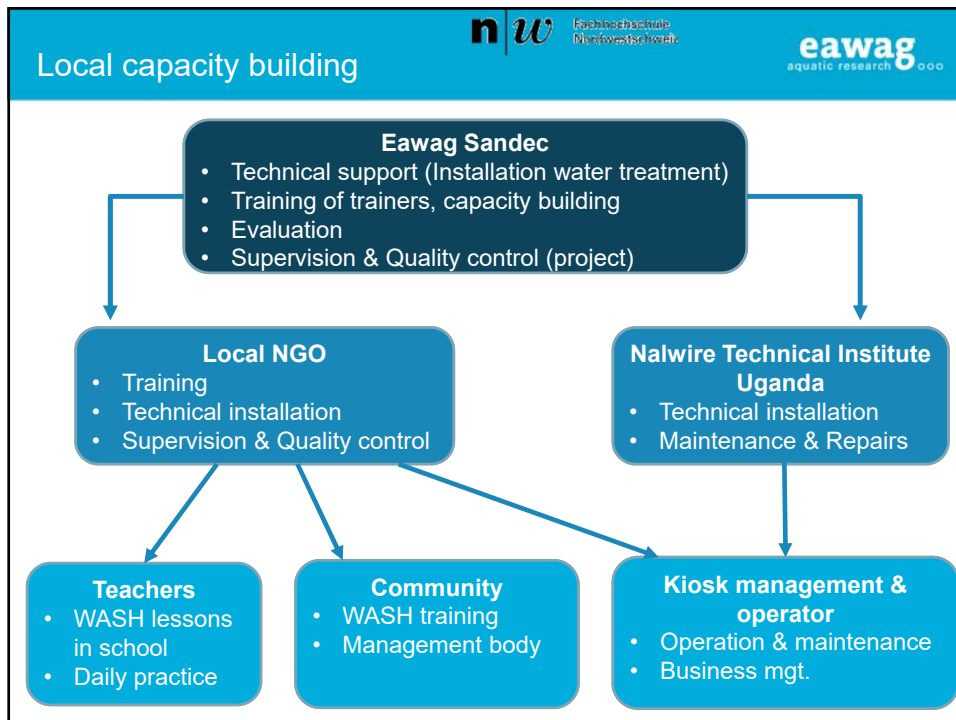

In collaboration with a local NGO

Evaluation of:

- Innovate technology for drinking water treatment in school and communities
- WaSH lessons in schools (safe water school manual) & training in community

The top photograph shows a group of people, including women and children, collecting water from a lake. They are using various containers like buckets and jugs. The bottom photograph shows two young girls walking through a grassy field, each carrying a large yellow water jug balanced on their head.

Gravity driven membrane filtration

- Use of local resources
- Only import: Ultrafiltration flat sheet membrane modules; pore size of 20-40 nm; 75 m²
- no backflushing or chemical cleaning of membranes
- no external energy supply for treatment
- turbid raw water with high organic matter content
- 4000-6000 L/day

Water kiosks for schools & community

Business Set-up

- Kiosks provide water for free to schools; to households 1 USD/month
- Managed & operated by school in collaboration with community committee
- Income covers cost for regular O&M
- Maintenance support & repair: local technical institute
- Regular quality control

Results

Technical

- Stable flux. Flowrates 2-6 L/ m²h. On average, 6.5 hours of filtration to cover the demand
- Low requirements for O&M. Monthly: solar panels; flushing of tanks, regular pump control
- Chlorination of jerrycans to avoid recontamination

Operational

- High demand for water from the kiosk
- Income is enhanced by sale of other health items at the kiosk
- Raw water consumption ↓ from 73%-41%
- Diarrhoea of children ↓ from 34% to 14%
- Scale-up required for sustainability

Possible Collaboration Eawag - Lions

eawag
aquatic research

Implementation of WASH innovations

- Eawag/ Sandec works with local partner NGO's to implement and evaluate innovations.
- We also would like to enhance the uptake of promising research outputs.
- However, financial support is needed to promote and scale-up promising WASH innovations.

Advice to the Lions WaSH Working Group

- Eawag/ Sandec has a long working experience and a large network in the WASH sector.
- Through the exchange with the Lion's WaSH Working Group -> support the successful implementation of Lion's WASH activities.
